Facts About AbaDerm Skin Care Complex

- **Natural & Safe.** AbaDerm™ is a topical antimicrobial lotion and, when properly applied on thoroughly cleaned, dry skin surfaces, a dime-sized amount provides an extended period of four to six hours of protection against contaminants without affecting the dexterity, natural respiration and perspiration of the skin.
- **Meets FDA Guidelines.** AbaDerm™ SCC was designed and formulated in the United States and is manufactured in an FDA-certified facility. This product has been classified as an over-the-counter (OTC) drug and is in total compliance with the requirements and regulations (CFR-21) of applicable United States regulatory agencies. As a topical, cosmetic OTC drug product, it complies with two (2) monographs published by the FDA. Products of this nature must adhere to the specifications and criteria contained in these monographs in order to be filed, certified and marketed in the United States. All FDA criteria have been met prior to market release of this new product.
- **Proven.** The active antimicrobial agent in AbaDerm™ SCC is Triclosan™ which has a long, safe, proven history of use and performance. It has been effectively blended with the non-active ingredients (including superb moisturizing components) to create a technologically superior formulation.
- **Added Layer.** In workplaces where latex gloves are required, AbaDerm™ SCC cannot be used in lieu of gloves. However, the product has many benefits when used with gloves. First, the "backup" layer of protection provides added peace of mind if gloves should tear or leak. And, gloves are easier to put on and take off when used over thoroughly dry AbaDerm™ SCC. The ingredients are cosmetic grade and will not degrade or compromise the composition of the latex gloves. The exceptional moisturizing qualities are an added benefit and cater to consistent use.

The Science Behind AbaDerm Skin Care Complex

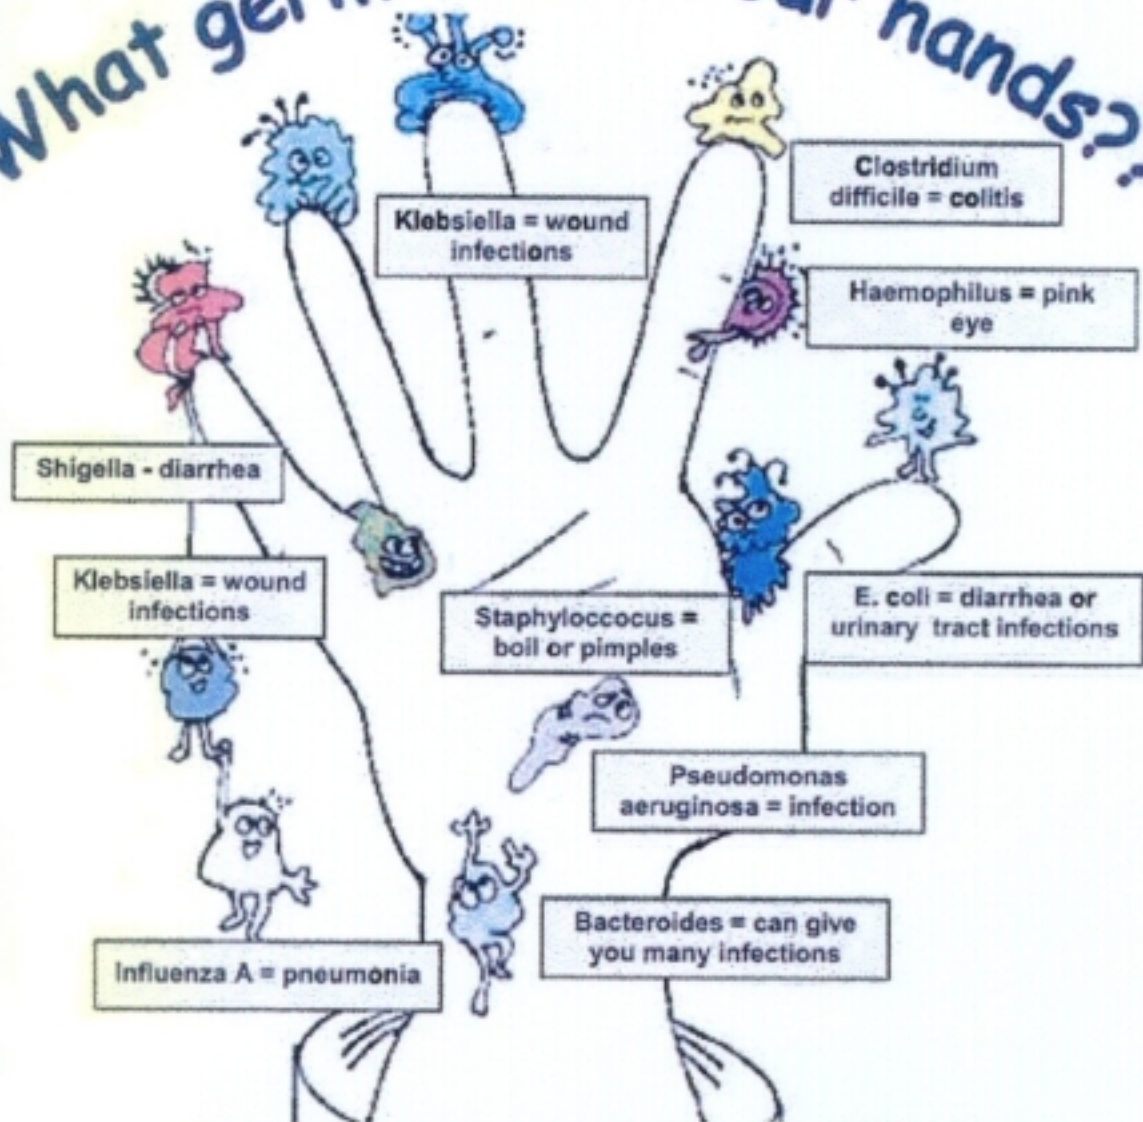

Although skin protection products have been used for many years in both Europe and, more recently, America, most haven't advanced much in their basic protection abilities. A number of these 'first' products are now considered to be technologically antiquated. Still, a few of these companies make some 'similar' products because they know well what the problems and needs are here. Most times, these companies simply settle for some 'me too' product technology and usually end up developing, manufacturing and marketing some average product that's nothing more than a skin protectant knock-off. Not so with the AbaDerm™ SCC manufacturer and its immense research and resources. The proprietary formulation, as well as the closely held manufacturing process, with its combination of specifically chosen skin protectant, antimicrobial and other ingredients work together in a unique way to help protect exposed skin from harmful and annoying stimuli and irritants and to significantly reduce the risks of cross contamination and infection from bacteria commonly found on the skin. When AbaDerm™ Skin Care Complex is completely dry on the skin surface, it develops a non-ionic, hydrophobic barrier. The product's ingredients combine to provide a layer of protection preventing possible penetration of germs and bacteria through and onto the skin. Additional protection comes from the naturally occurring bonding of the SCC with the cellular structure of the skin, while allowing the skin to breathe and perspire normally. The combined mechanical and antibacterial functions of this amazing product work so well together in providing an excellent line of defense against most bacterial and environmental contaminants.

Frequently Asked Questions About AbaDerm Skin Care Complex

1. Is there any documentation, data or case studies to support AbaDerm™ SCC performance?
Yes, plenty of evidence had to be provided the United States regulatory agencies to achieve the OTC drug designation we have in meeting the compliance regulations of the FDA. One can search the FDA website to see what the strict requirements are as set forth by CFR-21. Case studies are not yet available because this is a new product.
2. What are the other ingredients and, is there any history of allergic reactions?
All ingredients, as required by law are listed on every container of AbaDerm Skin Care Complex. There is no history of allergic reactions to any of these cosmetic-grade ingredients.
3. What does Triclosan™ do to the germs and bacteria when they come in contact?
The active agent Triclosan™ actually kills the microbes and creates a "zone of inhibition" on the skin surface, preventing (or restricting) germs and bacteria from penetrating the protective layer.
4. How safe is the product for children?
AbaDerm™ is non-toxic and safe enough to put on children's hands. It is hypoallergenic and very mild.
5. Is there anyone who shouldn't or couldn't use AbaDerm™ Skin Care Complex?
No! As long as the user has normal skin health, in general. Anyone having open wounds should not use AbaDerm™ until the area heals enough to have the 'dry' skin surface to bond the product.
6. How long will the 2 oz. bottle last and are larger sizes available?
The 2 oz. bottle was designed as a 'Pocket Personal' and provides enough applications for a one month supply with normal usage. AbaDerm™ SCC will be available soon in 8 oz., 16 oz. and 32 oz. bottles, as well as a gallon-size model with a measured pump.

What germs are on our hands???

Don't spread these germs!!!

Always wash and dry your hands thoroughly before applying...

AbaDerm™ Skin Care Complex

Your 4 to 6 hours, CONTINUOUS antibacterial, barrier, & dryness protection!
